PERSONAL STATEMENT

A creative technologist, designer, developer, and maker possess a genuine passion to harness strong **technical skills** along with **creative design** to build disruptive solutions which solve **human-centric problems**, especially with **hardware products** as the medium. Bridging the gap not only between science and art but also learn fast and integrate multidisciplinary knowledge into one project. I stay ambitious and take challenges, by taking part in every competition, conference, and exhibition tech or design related. Projects aside, Jason frequently speaks in exhibitions, talks, and seminars to share his perspective on technology and his journey of pursuing passion.
Jason always pursue excellence and disruptiveness. He would always invest 100% passion, skills, concentration, belief and time in a project. Looking forward to working with brilliant minds to accomplish greatness.
